Recomputation: per-update observations

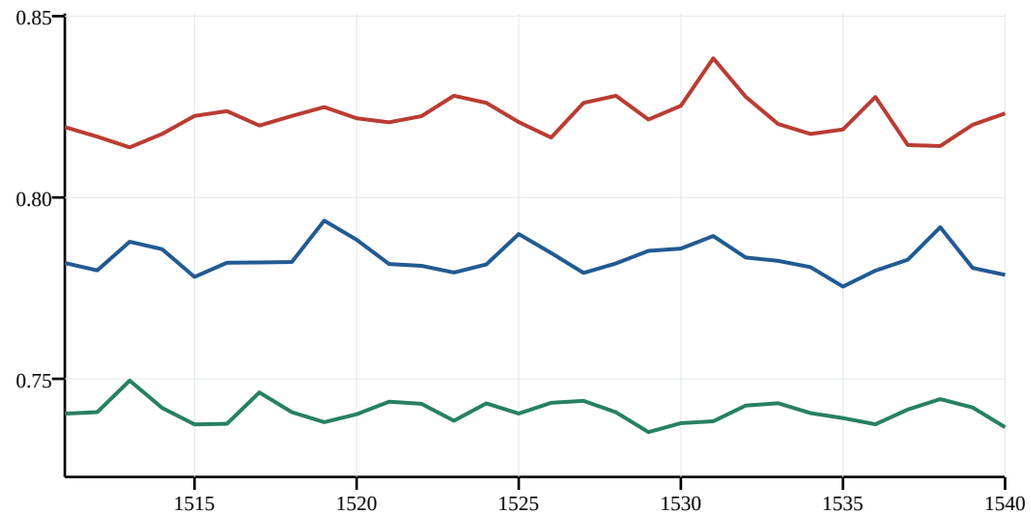
Single run per strategy; raw 30 points, no smoothing or downsampling. Step time = max rank local duration.

Host 125 | physical cards 4-7 | source 1a39572f

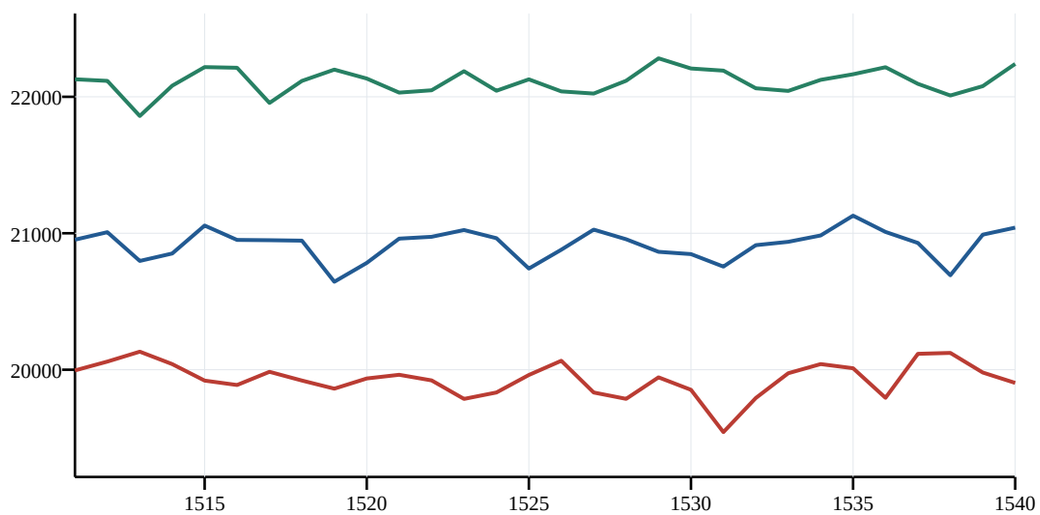
GBS 4 | LBS 1 | sequence 4096 | 10 warmup + 30 timed steps

Full (mean 0.7833 s) Selective (mean 0.8220 s) Off (mean 0.7410 s)

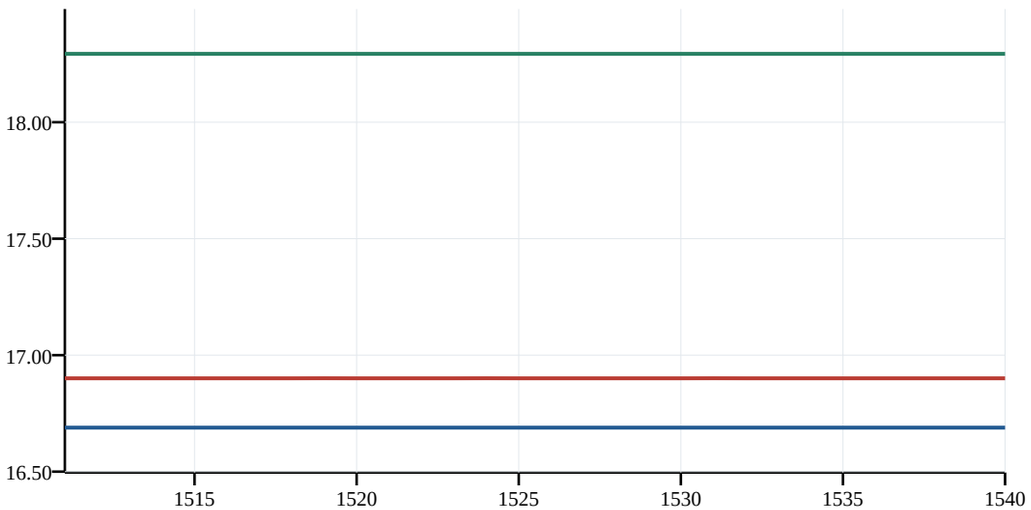
Step time (s)



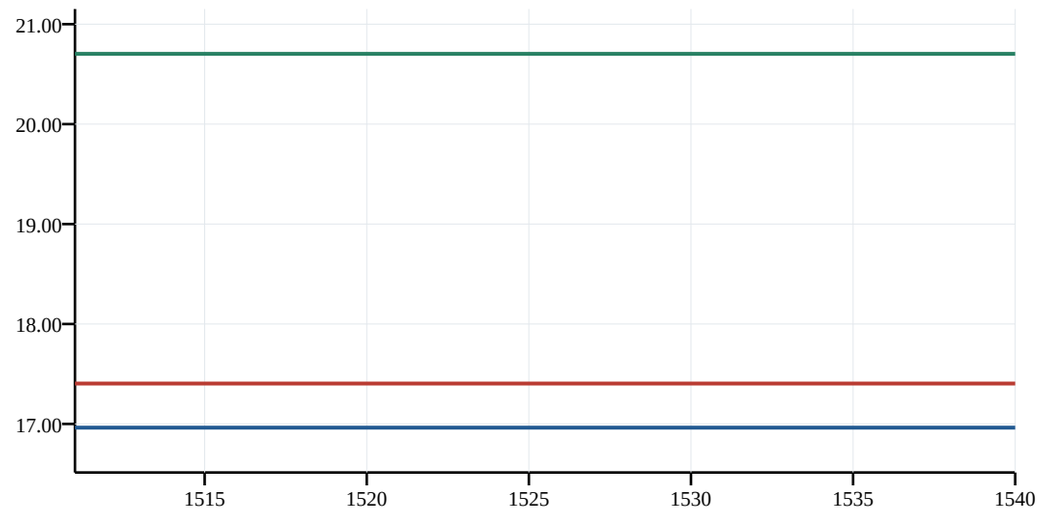
Global nominal tokens / s



Max-rank peak allocated (GiB)



Max-rank peak reserved (GiB)



Original global step (1511-1540)

Allocator peak reset each step. Values are framework allocator metrics, not physical HBM.

Mean refers to arithmetic mean across these 30 max-rank step observations; not a repeated-run estimate.

CPU preview; website export pending.

Endpoint occupancy only; continuous exclusivity not recorded.
